

Nguyễn Viết Anh Minh

Mobile Developer

0938459644 | anhminh1782002@gmail.com | linkedin.com/in/minhng178/ | Ho Chi Minh city, Viet Nam

SUMMARY

Mobile Developer with 2+ years of professional experience specializing in the React Native ecosystem (React, React Native, Redux-Saga, Zustand, Fastlane, Firebase) to build and deploy cross-platform mobile applications. Experienced in leading main mobile projects from scratch, maintaining enterprise apps, developing full-stack AI-integrated solutions, and applying AI-driven workflows to accelerate project delivery. Open to learning new tech stacks, frameworks, or programming languages as required by the role.

WORK EXPERIENCE

HDWEBSOFT Software Development Company

Mar 2025 - Present

Mobile Developer (React Native)

- Developer for Responsum (Healthcare Mobile App, Mar 2025 - Present): Joined an existing React Native codebase and actively contributed to present — handling tasks, testing, and release cycles across multi-disease white-label architecture, Redux-Saga state management, and Objective-C iOS push notification fixes.
- Project Support Developer for HD Booking App (Aug 2025 - Dec 2025): Maintained and enhanced a multi-tenant React Native salon & spa booking app — fixed core booking flow bugs, resolved cross-platform map issues on iOS/Android, optimized real-time chat performance, and integrated SePay payment gateway.
- Automated mobile release pipelines via Fastlane, GitLab CI, and managed publishing to Apple App Store and Google Play.
- Full-stack AI-Integrated Developer for GPBMT CRM (Jan 2026 - May 2026): Built from scratch starting Jan 2026 and delivered in May 2026 using Next.js, MongoDB, Mongoose, and custom JWT authentication, focusing on full-stack architecture and AI integrations.
- Main Developer for BonVoye (Location-Based Travel App, Jul 2026 - Present): Built directly from scratch using Flutter starting July 2026, developing Haversine GPS proximity detection, dev-mode location simulation, and in-app billing.

Wareflex

Jul 2024 - Feb 2025

Mobile Developer (React Native)

- Engineered the Warehouse Management System (WMS) mobile app using React Native, TypeScript, Zustand, and RESTful APIs.
- Integrated local offline caching with Zustand, eliminating manual data entry errors and optimizing inventory inbound scanning for warehouse staff.
- Supported web-based portal features using React and Next.js for operational logistics tracking.

Assure Global Group

Sep 2023 - Dec 2023

Front End Developer Intern

- Completed intensive training on React enterprise architecture, building frontend components for the WOS CRM project connecting students and educational institutions.

SKILLS

Programming Languages

JavaScript, TypeScript, Python

Core Technologies

React, React Native, Redux, Redux-Saga, Zustand, RESTful APIs, Firebase, Git

Applied & Familiar Technologies

Flutter, Dart, Fastlane, Next.js, MongoDB, Mongoose, GraphQL, Socket.io, Docker

Languages

English: TOEIC 830 (Professional Working Proficiency), Vietnamese: Native

PROJECTS

Responsum - White-Label Healthcare Mobile App | React Native Developer

2025 - Present

- Joined an existing React Native codebase (multi-disease white-label architecture) and contributed via task-based development, QA testing, and release management cycles.
- Engineered Redux state normalization with normalizr to handle deeply nested API data structures across symptom tracking, newsfeed, and community modules.
- Applied 8 patch-package hotfixes for 3rd-party native libraries, demonstrating deep native module debugging skills beyond standard React Native development.
- Resolved Objective-C native code to fix critical push notification bugs on iOS 14+ — direct native-layer intervention without relying on library patches.
- Supported bug fixes in the Fastlane CI/CD pipeline (staging/production) for Firebase App Distribution and App Store/Google Play publishing.
- Integrated i18n internationalization (i18n-js + react-native-localize), Firebase Analytics, Sentry crash monitoring, and Branch deep-linking.

HD Booking App — Multi-tenant SaaS Booking Platform | React Native Developer (Maintenance & Feature Enhancements)

Aug 2025 - Dec 2025

- Diagnosed and resolved critical bugs across the core booking business flow (service selection, scheduling, and order confirmation), ensuring end-to-end booking reliability on both iOS and Android.
- Fixed cross-platform map rendering issues on iOS and Android — resolved native map library conflicts and location permission edge cases affecting real-time store locator accuracy.
- Optimized in-app real-time chat performance: reduced re-render overhead, improved message list scrolling smoothness, and resolved Socket.io connection stability issues.

- Integrated SePay payment gateway as a new payment method, handling API flow, webhook verification, and UI feedback for the Vietnamese market.

GPBMT CRM — Diocese Management System | *Full-stack Developer (Built from scratch, AI-Integrated)*

Jan 2026 - May 2026

- Architected a full layered system: Next.js API Routes → Middleware → Service Layer → Mongoose Models, built and delivered from scratch in ~4 months.
- Implemented custom JWT authentication from scratch (access token 1h + refresh token 7d, httpOnly cookies, bcryptjs) — including a live migration away from NextAuth mid-project.
- Designed 5-role RBAC system (SuperAdmin, DioceseManager, ParishPriest, ParishAccountant, Viewer) with fine-grained permission control across all modules.
- Built multi-currency financial tracking, transaction approval workflows, payroll auto-generation, and comprehensive audit logs for full financial accountability.
- Delivered structured development process: PRD documentation, epic-based story planning, architecture docs, Vitest unit/integration API tests, and GitLab CI/CD with Docker Swarm (multi-stage Alpine).

OCR for Vietnamese Handwriting | *AI Engineer (Master's Side Project)*

Dec 2025 - Mar 2026

- Academic side project researched during Master's degree studies.
- Built OpenCV image preprocessing pipeline and deployed PaddleOCR models as a FastAPI REST API with a React web interface.

BonVoye — Location-Based Storytelling Travel App | *Mobile Developer (Flutter)*

Jul 2026 - Present

- Main developer building from scratch with Flutter, targeting 6 platforms: Android, iOS, Web, Windows, macOS, and Linux.
- Implemented Haversine formula GPS proximity detection (~20m radius trigger) and a dev-mode location simulator enabling full feature testing without physical movement.
- Designed feature-based clean architecture (screens/, providers/, models/, widgets/) with full widget + provider test suite and internal architecture documentation.
- Integrated dual storytelling modes (audio narration + webtoon), Hidden Threads multi-location quest chains, and in-app billing via Apple IAP & Google Play Billing.

EDUCATION

FPT School of Business & Technology

Sep 2025 - Current

Master's degree, Artificial Intelligence

GPA: 3.62 / 4.0

FPT University

Sep 2020 - Dec 2024

Bachelor's degree, Computer Software Engineering

GPA: 3.2 / 4.0
